Why code?

- To keep track of the workflow
- To make the analysis transparent
- To improve your skills and get more efficient as you code

```
1 parse_msd <- function(m, sd) {  
2   #  
3   # this function will  
4   # produce a nicely formatted string of  
5   # mean and sd to be used inline in text  
6   #  
7   print(paste("M = ", round(m, 2),  
8             ", SD = ", round(sd, 2),  
9             sep=""))  
10 }
```
